

# User Guide

## Jobs list

Click -> Select one job

Double click -> Edit job

Ctrl + A -> Select all jobs

Ctrl + click -> Select different jobs

Shift + click -> Select a range of jobs

## Options menu

Modifications are saved in real time.

Except for the encryption key and the simultaneous max file size. To save them, click on the “Save” button.

## Buttons

Trash icon -> Select one/multiple job(s) then click to delete it/them.

Plus icon -> Create a new job. Choose name, upload source folder and target folder, click “Create”. Same when editing, just change the desired field and click “Edit” to save modifications.

Play icon -> Select one/multiple job(s) then click to run it/them.

Pause icon -> Select one/multiple job(s) then click to pause it/them. If the selected job(s) are already paused, it will resume it/them.

Stop icon -> Select one/multiple job(s) then click to stop it/them. If the selected job(s) are already paused, it will resume it/them.

## Run strategy

Full -> Copy full folder.

Differential -> Copy changes from last version.

## Encryptor

Can be used as a standalone outside of the app, for encryption/decryption.

Usage: Encryptor <process|check> <key> <input> <output> [-file] (-file is to create an encrypted file, else it will only print it in console).

## Remote Control

The remote control is an application only used to connect to an equipment which already has the server app downloaded and is running. It will display the job information that are on the server.
